

Solenoid directional valves type DLOH, DLOK

poppet type leak free, direct operated, ISO 4401 size 06

1 MODEL CODE

/R = with check valve on policy |
/S = no hand operation and poppet overlapping during the intermediate position for safety applications (only DLOH)
/L1, /L2, /L3 = device for controlling switching time.
Not available for valves with electronic connectors

DLOH and DLOK are poppet type, two or three way, two position direct operated solenoid valves, designed to operate in oil hydraulic systems when leak free is required.

They are operated by wet type solenoids type OLU 11 and OLK 12 with coils certified according to the North American standard C UR US.

The DLOH are available with optional manual prolonged override, protected by a rubber cap (6), option /WP (standard for DLOK).

Moving parts are protected, lubricated and cushioned in oil.

Standard dimensions cartridge construction allows a wide variety of configurations only by easy replacement of the cartridge itself 4.

Cartridges of DLOH are available also as loose parts for mounting in the manifolds, see 10.

They can be supplied with optional devices for control of switching times.

Standard electric/electronic connectors 3 able to satisfy the requirements of modern machines for electric interfaces characteristics.

The coils ② are fully encapsulated (class H) and for DLOH are easily replaceable without the aid of tools.

Rugged execution suitable for outdoor

Surface mounting: ISO 4401 size 06. Max flow up to 12 l/min (DLOH) and 30 I/min (DLOK).

Max pressure: 350 bar for DLOH 315 bar for DLOK
