(1) See section 6 for materials specification.

(2) 6 and 4 versions differ only for the coil power, see power consumption at section 5 and operating limits at section 15.

(3) The "X" valves in full stainless steel execution are factory tested by Atos with mineral oil or pure water in order to avoid the contamination of the end user system. At the end of each valve model code must be specified the type of fluid to be used in the valve's testing: "H" for hydraulic oil or "W" for pure water.

(4) Only for Multicertified valves in full stainless steel "X" execution (not available for valves with UL certification)

Note: a Loctite sealant type 545, should be used on the cable gland entry threads

13 OPTIONS

O = horizontal cable entrance, to be selected in case of limited vertical space

R = the R device operates as a security (not combinable with /V).

When the valve is electrically energized, the manual reset knob must be manually lifted at the same time in order to permit the poppet to move from the rest position to the switched position. The return of the valve to the rest position does not require lifting the manual reset knob.

V = with handweel manual override (not combinable with /R)

Option /R

Lift to permit the valve switching
